A complete motion control solution

This cost-effective miniature servo system combines a precision stepper motor and high resolution encoder with sophisticated drive and control electronics in a single, compact unit.

- NEMA sizes 11, 17 and 23 each with two frame lengths
- Encoder resolution of 50,000 counts per revolution
- Speeds from 0 to 3,000 RPM
- Continuous torques from 0.027 to 0.87 Nm (1.24 Nm peak)
- H-infinity controller and vector drive for fully closed loop control of position, speed and torque. Tuning not required in most applications.
- Fully programmable for standalone operation
- RS232 and USB communications as standard
- Options for RS485 and Ethernet
- Digital and analogue input and output
- Safe and efficient 24V DC operation

Compared with an equivalent size of stepper motor Cool Muscle works faster, with more available torque, it is more efficient and generates less heat.

Closed loop control means no step loss. In an open loop system it is possible for the motor to fail to move the exact number of steps if it is overloaded. Cool Muscle, being a closed loop control system, is able to identify any potential for step loss and to correct it.

Cool Muscle is available with two types of control interface: Pulse Type (P) and Computer Type (C). The P-Type is applicable for a drive and stepper system with step-pulse control, such as a PLC. Cool Muscle provides an effective drop-in solution to resolve step loss problems and also provides a more integrated solution, having a combined stepper and drive. The C-Type offers a higher level of computer control in a single integrated unit which can remove the need for a separate controller or, in more complex systems, reduce the investment required in additional controllers.

Cool Muscle's unique features include the ability to link up to 15 motors which can operate together in complex sequences without an additional controller. Cool Muscle is able to use a physical limit of travel as its reference position, using torque sensing to safely and accurately find the limits of travel without needing a position sensor (e.g. limit switch).

The high level of integration provided by Cool Muscle reduces cabling, keeps components to a minimum and speeds up system assembly.

Cool Muscle is ideal for laboratory and test equipment or for light industrial automation.

Intelligent Motors

General and environmental specifications

Encoder	Incremental magnetic encoder (50,000 pulses per rotation)
Control Method	Closed loop vector control
Input Supply Voltage	DC24 V±10%
Resolution Pulse Rotation (Pulse/Rotation)	200, 400, 500, 1000(default), 2000, 2500,5000, 10000, 25000,50000 Select by parameter
Ambient Operating Temperature	0°C to 40°C
Storage Temperature	-20°C to +60°C
Operating Humidity	Less than 90%RH
Shock	Less than 10 G
Vibration	Less than 1 G

Pin layout

For Reliance Cool Muscle electrical interfacing and connector pin layout see Technical Information [page T2-5](#).

Input/output signal

Pulse Interface	CW/CCW	Step/Direction
 Input Signal Pulse Input	CW/CCW Pulse	Step Pulse
	Maximum frequency: 500 Kpps Minimum pulse width: 0.8 µsec Voltage level H (with pulse) > +3.0 V (+24 Vmax) 7 mA-1 5mA Voltage level L (no pulse) < +0.8 V	Maximum frequency: 500 Kpps Minimum pulse width: 0.8 µsec Voltage level H (with pulse) > +3.0 V (+24 Vmax) 7 mA-15 mA Voltage level L (no pulse) < +0.8 V

Variable Voltage Interface - Now integrated into the C-Type motor

 Input Signal Analogue Input	Speed Ccontrol setting
	Increase the voltage from 2.6 V to 4.8 VDC to increase speed in the CW direction Decrease the voltage from 2.4 V to 0 VDC, to increase speed in the CCW direction. Use OP AMP for maximum resolution Position control setting Travel distance is proportionate to voltage input (between 0 V and 4.8 VDC) Maximum travel distance is set by a parameter

Computer Control Interface

 Input Signal Control Level	Via supplied cabling - motor interface is TTL, please specify RS232 or RS485 interface option
	Voltage level high> 3 V (minimum 7 mA) Voltage level low< 0.8 V

RT3 Real Time Interface

Co-ordinated Motion	Allows 2 axes to work together to create accurate complex motion
Logic Banks	Embedded PLC up to 200 steps for mathematical calculation of motion
Quadrature	Simulated AB outputs from the magnetic encoder. Maximum frequency 20 kHz
Shared I/O	Inputs or outputs are available to be read and accessed by all motors running programs and logic banks

Software interface

For programming details for the C-Type Reliance Cool Muscle see Technical Information pages T2-3 to T2-5.

i Product options

- For further information about customising cables, please contact us
- Customised cables are available with photosensors option

Communication cards

RS485, PROFIBUS and Ethernet cards are available as options for the Reliance Cool Muscle servo system. Our engineers provide technical support based on extensive experience integrating the Reliance Cool Muscle with third party controllers, HMIs and PLCs.

Power supply

Designed specifically for the Reliance Cool Muscle, this power supply is built to withstand the current draw spikes which the hard stops or starts often require. Specification of the power supply is 150 W/300 W, 6 A/10 A.

Cables

A standard motor cable (40 cm) and varistor are supplied with every motor. Longer motor cables are available as an option.

A Y-cable is required to connect the Reliance Cool Muscle to a USB or serial port, see [page 2-11](#)

Multi-motor custom cables can be made to suit your application.

Control room

Control Room is a free application which provides basic tools for setting parameters and creating motion profiles. A user friendly interface makes it easy to work with the Reliance Cool Muscle.

Control Room replaces the CoolWorks software.

CoolWorks continues to be supported by Reliance.

We provide a range of associated products which compliments the Reliance Cool Muscle and enhance its performance, including couplings, gearboxes and linear motion components.

Reli-a-Flex® flexible shaft couplings

The Reli-a-Flex® range of one piece slit couplings has been specially designed to provide accurate transfer of motion between two rotating shafts while at the same time catering for parallel and angular misalignment as well as protecting the bearing systems. See [page 8-6](#) for more information on the Reli-a-Flex® range.

Planetary gearboxes

A range of high quality planetary gearboxes is available to suit your application needs. Combine a low backlash, zero maintenance and high durability gearhead with the Reliance Cool Muscle to maximise performance. Available in NEMA 17 and 23, ratios 3:1 to 512:1. See [page 3-3](#) for more information.

Intelligent actuator systems

A range of intelligent actuators is available to support your precision motion control needs. These include rack actuators and positioning stages for use with the Reliance Cool Muscle. Please contact us or visit the website for more information; www.reliance.co.uk/shop See [pages 2-14 to 2-23](#) for more information.

Precise, efficient linear motion

This compact actuation system combines the Reliance Cool Muscle servo system with a rack and pinion drive to give precise linear motion for high speed applications.

Multiple configurations are available developing peak forces up to 150 N and rated speeds of 300 mm per second, with resolutions of better than 1 micron and standby power consumption of less than 1.7 watts. The assembly has a number of different mounting options for ease of mechanical installation.

The Rackuator™ has built-in closed loop control with an integrated 32 bit CPU, magnetic encoder and PLC. This intelligent assembly can be programmed to decide for itself where it should be at any given time and to send out continuous motion data such as speed, position and torque. The unit is fully integrated, saving space and cost, and makes system integration faster and simpler with control at the point of use. The Rackuator™ is fully programmable and can store onboard discrete

positions, speeds, accelerations, timers, torque limits and custom variables, all to be recalled by up to 15 separate motion control programs. It also has built-in maths and S curve functions for advanced motion control.

Multiple Rackutors™ can work in sequence, either to produce circles, ellipses, or complex arc motions, or in a daisy chain network to automate pick-and-place machines. The Rackuator™ can be operated independently or communicate with a PC host via RS232 or USB. It can also be fitted with a traditional stepper motor, being driven by step and direction signals or with CW/CCW pulses to bring the advantages of an AC servo system to any stepper motor application.

The Rackuator™ is available with both solid and tubular racks, suitable for a variety of applications from scientific research to food preparation and packaging.

Providing custom-built solutions

As well as offering a range of standard actuators Reliance is able to develop bespoke solutions to suit individual requirements. Bespoke motorised actuators are based on our range of catalogue components and assemblies, together with housings and fittings manufactured by Reliance in the UK and Ireland.

XYZ theta stage

Working closely with our customers to understand the application and design specification, we are able to offer design engineering support to help develop an appropriate assembly, bringing knowledge and experience from working in a variety of industries and applications.

Typical examples shown below include a miniature motorised leadscrew actuator for a drug dispensing system, a motorised leadscrew driven slide assembly, using multiple Reliance Cool Muscle motors, for an XYZ theta position system, and a 3-axis rotary-linear actuator for a medical scanner.

Actuator for a medical scanner

Modular linear actuator

Design engineering support

Manufacturing and assembly

Motorised leadscrew-driven linear slide

The RCMS series of leadscrew stages combines the high speeds and programmability of Reliance Cool Muscle motors with the accuracy and reliability of a leadscrew-driven linear slide.

The RCMS is available with two different motor sizes and in a wide range of travel lengths and leadscrew and carriage configurations.

The precision slide's aluminium guide and carriage are driven by a rolled stainless steel leadscrew, available with metric and imperial leads. High performance polymers and TFE coating extend the life of the slide's moving parts.

The Reliance Cool Muscle motor, in NEMA sizes 17 and 23, integrates an efficient vector drive and H-infinity controller with a 50,000-count encoder to form a servo positioning system operating at speeds from 0 to 3,000 rpm with minimum power consumption. Cool Muscle's torque sensing and software travel limits give the option of eliminating home and limit switches from your system.

Typical applications for the RCMS include test instrumentation used in industrial automation and university laboratory research equipment used by the energy industry.

i Product options

- Special carriage, rail, screw or metric mounting configurations
- Higher accuracy leadscrew
- Left Hand (LH) or Left/Right (L/R) thread
- Metric leads and guide lengths
- Alternative guide lengths
- Sensor kits, add -S to the end of the part number e.g. [RCMS17L-M04-C-1-18-S](#)

Intelligent Motors

Hybrid linear actuators

Reliance offers a range of low maintenance hybrid linear actuators for equipment designers who require high performance and exceptional endurance in a very small package. The actuators are engineered with custom thermoplastics in the rotor drive nut and a stainless steel leadscrew. This allows the linear actuator to be quieter, more efficient and more durable than the standard acme thread and bronze nut configuration commonly used in other linear actuators.

The hybrid linear actuators are available in NEMA frame sizes 8 to 34, with up to 400 full steps per revolution and travel increments as small as 0.003 mm/step.

There are three configurations:

- captive shaft
- non-captive linear
- external linear

Captive linear actuators offer a short stroke in a compact package where anti-rotation of the shaft is not possible by any other means. These units convert rotary to linear motion via an integrated leadscrew and nut. The integrated leadscrew is held captive within the motor housing, welded to a stainless steel spline arrangement. This provides anti-rotation of the leadscrew enabling precise linear movement.

The non-captive linear actuator leadscrew travels through the motor giving an extremely short footprint. As with the captive shaft actuator, conversion of rotary to linear motion takes place within the motor itself by means of the integrated leadscrew and nut, therefore eliminating the use of belts and pulleys, couplings and other mechanical transmission components.

External linear actuators combine conventional leadscrew and nut technology with stepper motor technology. The leadscrew forms part of the motor shaft negating the need for a shaft to shaft coupling, thus providing zero transmission error from motor to screw and shortening the overall linear footprint.

Contact us for details of products and specifications.

Can-Stack linear actuators

For volume applications we also offer Can-Stack linear actuators, which are a threaded rotor in conjunction with a leadscrew shaft to provide rapid linear movement in two directions (inward and outward). They are available in captive shaft, non-captive linear or external linear variants.

Unique features give ruggedness and reliability that assure long life and consistent performance. Rare earth magnets are available for even higher thrust. The actuators are built with dual ball bearings for greater motion control, precise step accuracy and long life.

Applications for the Can-Stack linear actuators include medical instrumentation, machinery automation, robotics and other automated devices which require precise, remote controlled linear movement in a broad range of temperature environments, whilst the hybrid linear actuators are ideal for applications requiring precise positioning, rapid motion and long life, including XY tables, medical equipment and semi-conductor handling equipment.

Micro dispensing syringe drive

Pharmaceutical testing equipment

Customised configurations

In addition to standard configurations the actuators can be modified to meet specific application requirements. Reliance's applications engineering experience, manufacturing and assembly capabilities enable us to provide modified products and bespoke assembly solutions, see [page 2-18](#).

Linear rail actuators

The linear rail actuator consists of a stationary base and load bearing carriage that travels along a rigid extruded aluminium rail, together with a single stack size 17 stepper motor.

The carriage design is unique; it controls slide bearing play with a self-adjusting linear bearing. Integrated along the entire length rail system are “T” slots allowing mounting of limit switches and sensors.

The leadscrew is made from 303 stainless steel with a Black Ice™ TFE coating for durable and permanent lubrication.

The features of the linear rail actuator include:

- “T” slots integrated into exterior rail bottom and sides that accommodate full length support and various mounting options
- Loads easily attach to the compact, moving carriage with four or six M4 x 0.7 size screws
- Load bearing carriage moves efficiently and smoothly within the internal rail geometry of this specially designed aluminum extrusion
- Rail provides end-to-end axial stability and precise motion system accuracy
- Automatic adjustments of slide bearing play with a patent pending “anti-backlash” linear bearing
- Rated life equals that of the existing leadscrews of similar size
- Leadscrew end configurations adapt to various rotary motion sources
- Black Ice™ TFE coatings on a 303 stainless steel leadscrew

For optimum performance, the system can be fitted with the Size 17 Hybrid Linear Actuator, see [page 2-24](#) available in a wide variety of resolutions - from 0.001524 mm/step to 0.048768 mm/step, delivering thrust of up to 222 N. For greater performance Size 17 Hybrid Double Stack Linear actuators provide 0.0158mm/step to 0.127 mm/step and deliver thrust of up to 337 N.

Introducing the motorised leadscrew linear slide range

Reliance offers a range of motorised actuator systems including the motorised leadscrew linear slide. It offers exceptional linear speed, accurate positioning, and long life in a compact assembly. One of its many advantages is that the length and speed are not limited by critical screw speed, allowing high RPM and linear speeds, even over long spans. Lengths up to 2.4 metres can readily be built, and longer lengths are possible on a special order basis.

The motorised leadscrew linear slide features wear-compensating, anti-backlash carriages to ensure repeatable and accurate positioning. The pre-assembled unit combines a screw-driven linear actuator with an integrated stepper motor drive reducing part count and improving system integration.

It is available in standard and wide base options, each capable of supporting a range of load capacities. There are four variants of the standard base supporting 67 N, 156 N, 222 N and 445 N, and two of the wide base to support 156 N and 445 N. Both are available with a right or left hand thread; the nominal thread leads are shown in the table opposite. The stepper motor is available in three sizes - NEMA size 11, 17 and 23, alternatively the actuator can be supplied integrated with the Reliance Cool Muscle motor, see [pages 2-19 to 2-23](#), or as a non-motorised leadscrew linear slide see [page 7-38](#).

Typical considerations when selecting a linear actuator include:

- How much force is required from the linear actuator?
- What is the duty cycle of the linear move?
- What is desired step increment from the linear actuator?
- What is the step rate or speed of travel?
- Bipolar or unipolar coils in the stepper motor prime mover?
- Stepper motor coil voltage?
- Must the lead screw hold position with power off or must it be "backdrivable" with power off?
- Are there size restrictions (max footprint of the linear actuator)?
- What is the anticipated life requirement?
- Temperature of operating environment?

Please contact us to discuss your requirements.
